EXPERIMENT 5

Building Reports, Dashboards and Custom Pages for the Application in Zoho Creator

---

Gym Membership Enrollment - Reports,Dashboard&Custom Page Use Case

Laban Vishal W
241401042

Aim

Todesign and build functional reports, dashboards, and a custom page in Zoho Creator that consolidate and visualise the enrollment data captured by the Membership_Enrollment_Form, enabling the front desk and trainers to monitor membership trends, workout-slot demand, and enrollment timing at a glance.

Problem Statement

TheMembership_Enrollment_Form built in Experiment 4 now captures every new enrollment in a structured record, but the front desk and trainers still have no consolidated way to review this data. Scanning submissions one record at a time makes it difficult to see how many members are new versus renewing, which workout time slots are most in demand, how enrollment volume is spread across upcoming start dates, or which fitness goals members most commonly report.

Design a reporting and analytics layer on top of the existing enrollment data that lets the front desk view submissions grouped by membership category, and lets managers and trainers see, at a glance, age distribution, workout-slot popularity, upcoming start-date trends, and common fitness goals — all through a native Zoho Creator List Report, a Dashboard of chart widgets, and a consolidated Custom Page.

241401042

Procedure

1. LogintoZoho Creator and open the existing “Gym Membership Enrollment & Front Desk Management” application built in Experiment 4.
2. Create a List Report named “All_Gym_Membership_Enrollments” on the Membership_Enrollment_Form and group records by the Membership_Type field so submissions appear under New Member, Renewal, and Member Enrollment tabs.
3. Add report columns for Member Name, Age, Membership Type, Email Address, Contact Number, Residential Address, and Emergency Contact Name so front-desk staff can scan key details without opening each record.
4. Create a Dashboard page and add four chart widgets sourced from the same form: a bar chart comparing enrollment counts across Membership_Type and Age, a pie chart showing the distribution of Preferred_Workout_Slot choices, a bar chart plotting Preferred_Start_Date against Fitness_Goals_Medical_Notes, and a radar chart summarising total records by Preferred_Start_Date.
5. Configure each widget’s data source, category and value fields, and colour legend, and set report and dashboard permissions so Front Desk and Trainers can view but not edit the configuration.
6. Build a Custom Page named “GME” that embeds the List Report and the Dashboard widgets together into a single consolidated screen for daily front-desk use.
7. Preview the live report, dashboard, and custom page; verify that the sample enrollment records from Experiment 4 render correctly in every widget; and confirm that switching tabs on the report updates the record list as expected.

Data Model

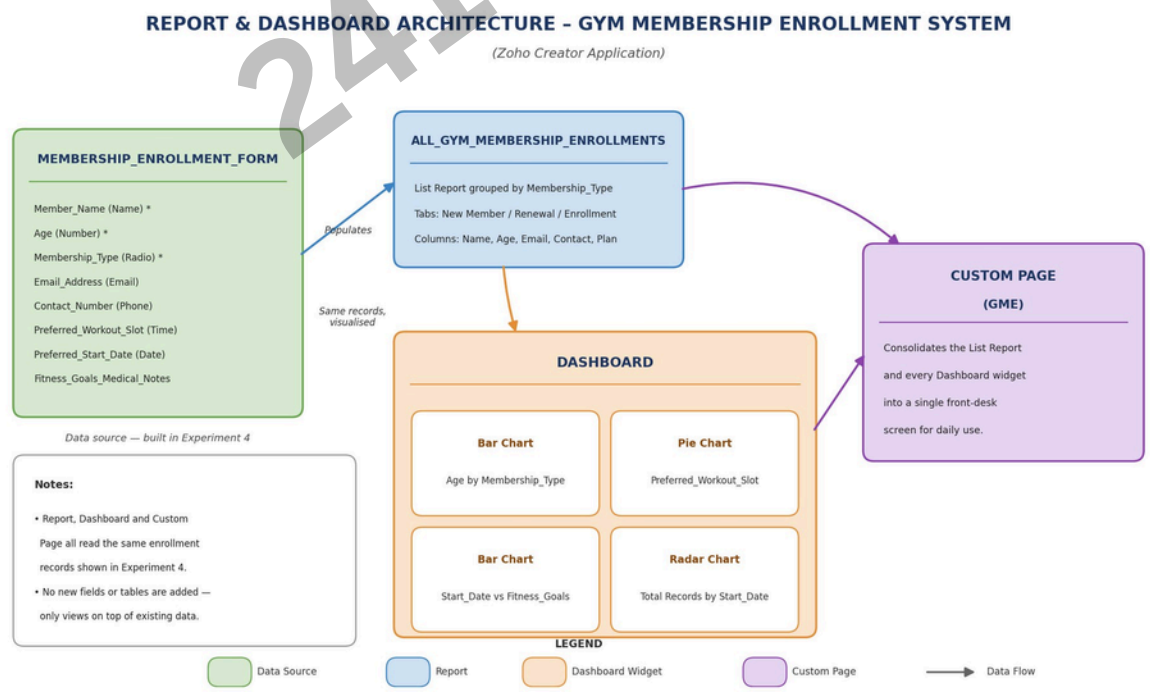

This exercisedoes not introduce a new data table; the report, dashboard, and custom page all read from the same Membership_Enrollment_Form record set created in Experiment 4. The List Report

(All_Gym_Membership_Enrollments) presents these records grouped by Membership_Type. The Dashboard aggregates the same records into chart widgets keyed on Age, Preferred_Workout_Slot, Preferred_Start_Date, and Fitness_Goals_Medical_Notes. The Custom Page (GME) then combines the List Report and the Dashboard widgets into one consolidated view so the front desk does not need to navigate between separate report and dashboard pages during daily operations.

Report & Dashboard Structure

Section	Key Components	Purpose
List Report	All_Gym_Membership_Enrollments, grouped by Membership_Type	Provides a filterable, tab-grouped view of every enrollment for quick front-desk lookup.
Dashboard – Enrollment Overview	Bar chart (Age by Membership Type), Pie chart (Preferred Workout Slot)	Summarises how many members fall into each category and which time slots are in demand.
Dashboard – Trends & Preferences	Bar chart (Preferred Start Date vs Fitness Goals), Radar chart (Total Records by Start Date)	Highlights upcoming start-date volume and common fitness goals for trainer planning.
Custom Page	GME page combining the List Report and all Dashboard widgets	Gives front desk and trainers a single consolidated screen for daily enrollment review.

Report, Dashboard and Custom Page Components and Their Mapping

The table below maps every reporting component built in this exercise to its configured name, purpose, and a sample insight it surfaces.

Component	Name	Purpose	Sample Insight
List Report	All_Gym_Membership_Enrollments	Displays every submitted enrollment grouped into New Member / Renewal / Member Enrollment tabs.	8 records across 3 tabs
Bar Chart	Age_by_Membership_Type	Compares total enrollment counts across each membership category.	New Member: highest count
Pie Chart	Preferred_Workout_Slot_Distribution	Shows the share of members who prefer each daily workout time slot.	7:00–18:30 slots
Bar Chart	Age_Distribution_New_Member	Plots the age spread specifically among new-member enrollments.	Count axis 0–90
Bar Chart	Preferred_Start_Date_vs_Fitness_Goals	Groups each member's stated fitness goal against their preferred start date.	"Aiming for weight loss..." etc.
Radar Chart	Total_Records_by_Start_Date	Visualises how enrollment volume is spread across upcoming preferred start dates.	20-Aug to 01-Oct-2026
Custom Page	GME	Combines the List Report and all Dashboard widgets into one consolidated screen.	Front-desk daily-use screen

Explanation of Screenshots

Thefollowingscreenshots illustrate the complete workflow: configuring the List Report and Dashboard widgets in Zoho Creator, viewing the live report and dashboard, and reviewing the consolidated custom page.

1. Input - Zoho Creator Report & Dashboard Builder

The builder view should show the Report/Dashboard component palette alongside the configured All_Gym_Membership_Enrollments report and Dashboard widgets. The properties panel should show the grouping field, chart type, category and value fields, and colour legend for the selected widget.

PASTE / INSERT SCREENSHOT HERE

Fig. 1 – Zoho Creator report & dashboard builder

2.TheReport - AllGymMembershipEnrollments

The live List Report should display every submitted enrollment grouped into New Member, Renewal, and Member Enrollment tabs, with each record card showing the member's name and age so the front desk can quickly scan and select a record.

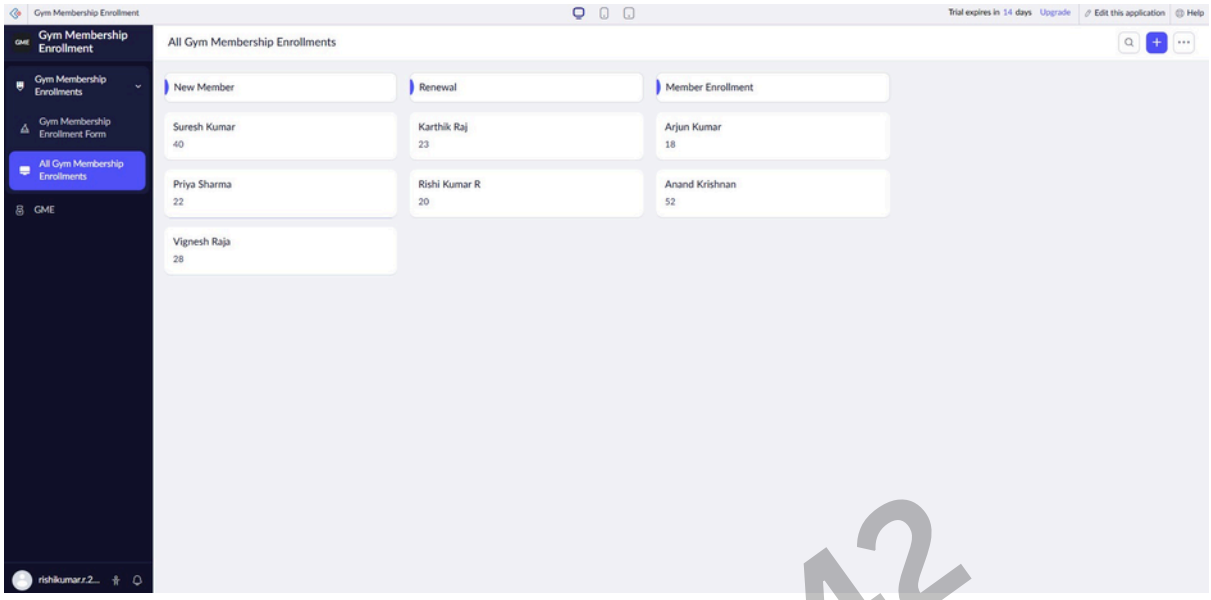

Fig. 2 – All Gym Membership Enrollments report, grouped by Membership Type

3. The Dashboard - Enrollment & Workout Slot Overview

Thefirst part oftheliveDashboardshould combinethe grouped report panel with two summary charts: a bar chart comparing enrollment counts across Membership_Type and Age, and a pie chart showing how members are distributed across the available Preferred_Workout_Slot options.

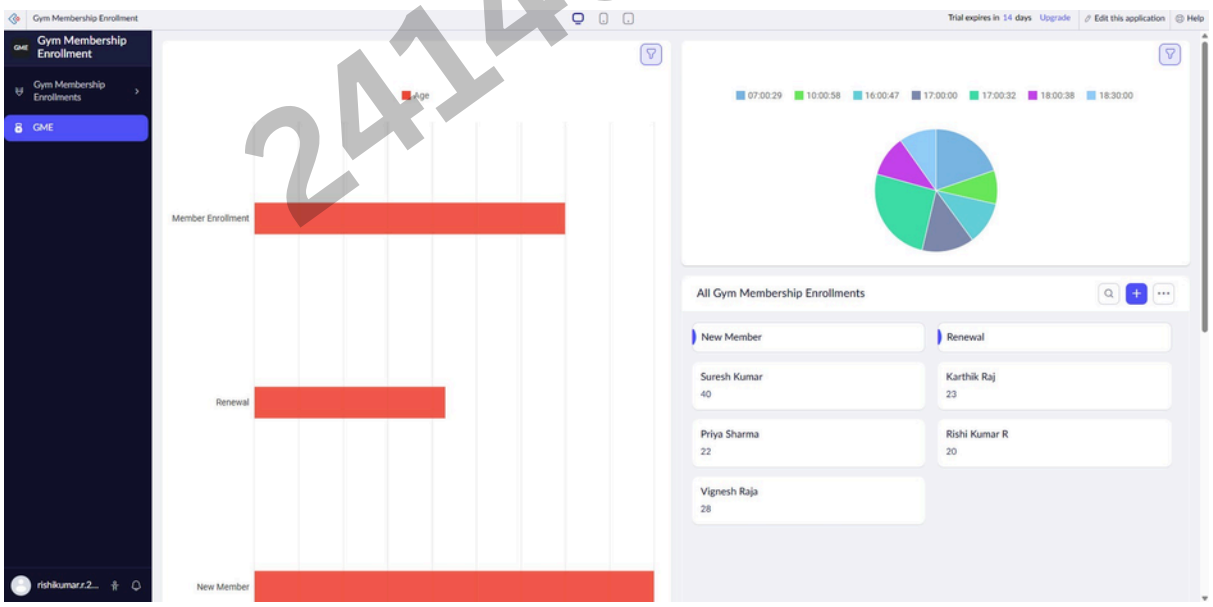

Fig. 3 – Dashboard: Age/Membership Type bar chart, Workout Slot pie chart, and grouped report panel

4. The Dashboard - Trends, Preferences and Output Data

Thesecondpart ofthelive Dashboard shouldcapturetheagedistribution among new members, a bar chart plotting Preferred_Start_Date against each member's stated Fitness_Goals_Medical_Notes, and a radar chart summarising total records across upcoming preferred start dates — giving trainers a forward view of incoming enrollment volume.

Result:

The Report, Dashboard, and Custom Page for the Gym Membership Enrollment application were successfully designed and implemented in Zoho Creator on top of the Membership_Enrollment_Form built in Experiment 4. The All_Gym_Membership_Enrollments report groups every submission by Membership_Type, and the Dashboard visualises enrollment counts, workout-slot preferences, age distribution, and start-date trends through bar, pie, and radar chart widgets. Sample enrollment records were verified across every report and dashboard view, and a consolidated Custom Page (GME) was configured to bring the report and dashboard together, demonstrating a functional analytics layer for the gym's front-desk operations.
