Exp 7

Integrating a Zoho Creator application with another Zoho service using connections and APIs

1. Aim

To integrate a Zoho Creator application with Bigin by Zoho CRM using a microservice connection, a form workflow, and Deluge scripting, so that the details submitted through a Creator form are created automatically as arecord in Zoho CRM.

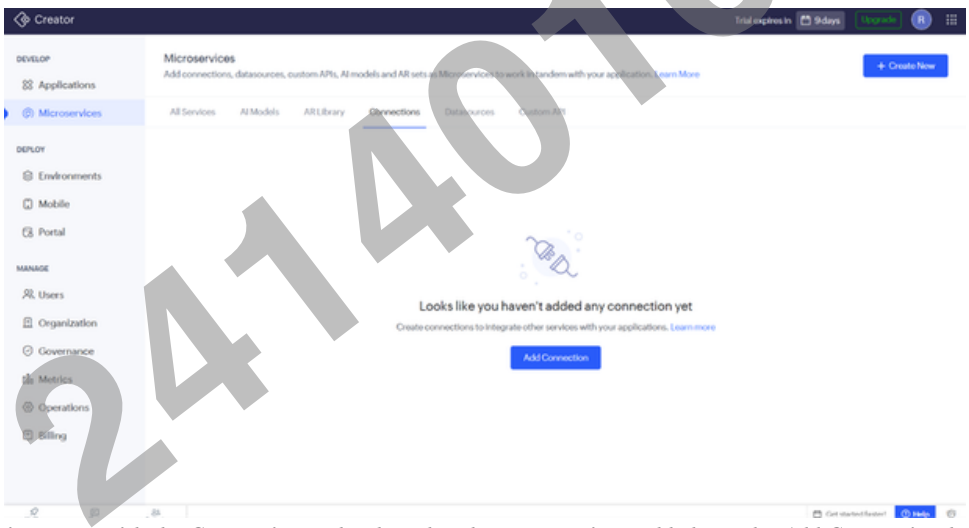

2. Procedure

PhaseA:Creating the Bigin by Zoho CRM Connection

1 Log in to your Zoho Creator developer account and open the Vehicle Service Request Form application.

2 In the left navigation panel under the Develop section, click ***Microservices*** to access the centralized integration environment.

3 Open the ***Connections*** tab. Since no connection exists yet, the page shows “Looks like you haven't added any connection yet”. Click ***Add Connection***.

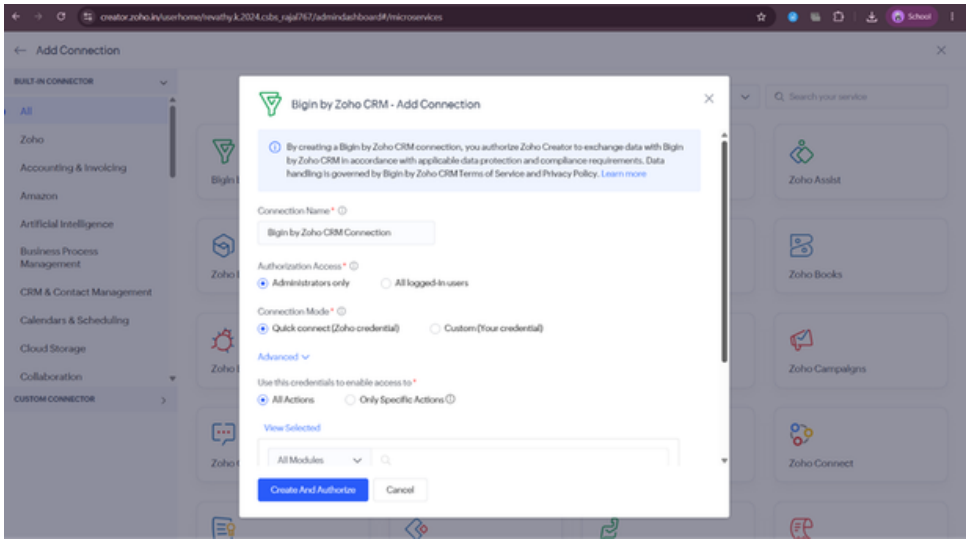

The Microservices page with the Connections tab selected and no connections added yet; the Add Connection button is used to start.

4 From the Built-in Connector list, select ***Bigin by Zoho CRM***. In the Bigin by Zoho CRM – Add Connection dialog, keep the Connection Name as ***Bigin by Zoho CRM Connection***.

5 Set Authorization Access to ***Administrators only***, Connection Mode to ***Quick connect (Zoho credential)***,andenableaccessto ***All Actions***.Click ***CreateAndAuthorize*** .

The Bigin by Zoho CRM – Add Connection dialog with Authorization Access set to Administrators only, Connection Mode set to Quick connect (Zoho credential), and access enabled for All Actions, followed by Create And Authorize.

PhaseB: VerifyingtheConnection

6 After authorization, return to Microservices > Connections and confirm that the Bigin by Zoho CRM Connection card appears with the link name bigin_by_zoho_crm_connection and a green ***Connected*** status.

7 Note this link name, as it is the reference used to call the connection from the form workflow script.

The Connections tab listing Bigin by Zoho CRM Connection (link name bigin_by_zoho_crm_connection) with the Connected status.

Phase C: Setting Up the Form Workflow

8 Navigate back to the application, select the form that submits the request, and click the ***Workflow*** tab in the top header.

9 Create a new form workflow that executes on ***Created > Successful form submission***.

10 In the Add New Action panel, set ***Run this action*** to ***Always***, so that every successful submission is sent to Zoho CRM, and choose ***Deluge script*** from the Action type grid.

Phase D: Compiling the Deluge Script Code

11 In the Deluge editor, initialize a map named leadInfo and map the form fields to the Zoho CRM fields: Student_Name1 to Last_Name, Email_Address to Email, Contact_Number to Phone, and Preferred_Course to Description.

2140104 2

12 `Call zoho.crm.v8.createRecord("Leads", leadInfo, Map(), "zoho_crm_connection") to` create the record through the connection link name, and store the result in response.

1 Use info statements to trace the start of the CRM action and the response returned by Zoho CRM.

3 Click ***Save*** to run the compiler validation and save the script.

1

4

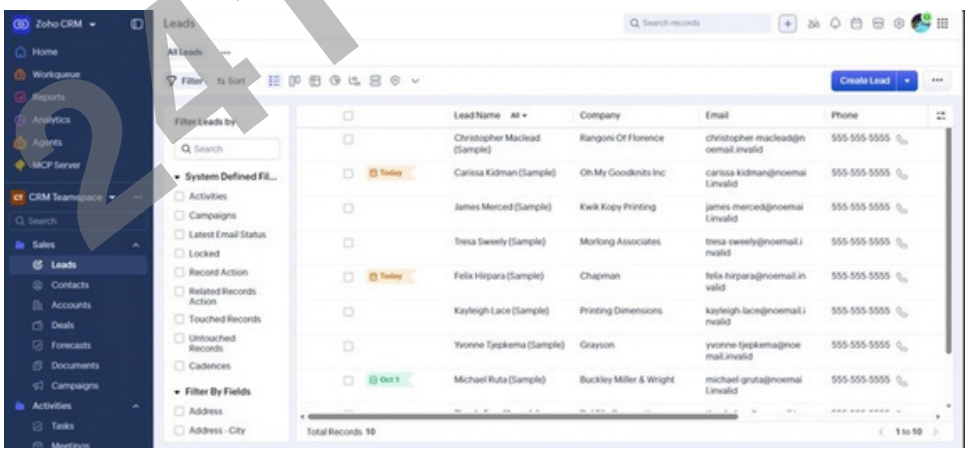

The Deluge Script editor for the form workflow (Created > Successful form submission > Successful submission). The script builds the leadInfo map, calls zoho.crm.v8.createRecord for the Leads module using the connection, and traces the response using info.

3. Output & System Verification

The integration between the Creator application and Zoho CRM was set up through a microservice connection and a Deluge workflow. As seen in the Microservices interface, the Bigin by Zoho CRM connection is established and available.

- ***Connection Diagnostic Result:*** Connected (Green Status Verified)
- ***Operational Availability:*** The connection link name bigin_by_zoho_crm_connection is available for reference in the form workflow script.
- ***Target Module:*** Records created by the workflow are added to the Leads module of Zoho CRM, shown below.

The Zoho CRM Leads module, the destination module for records created by the createRecord call in the workflow.

4. Conclusion

The lab exercise demonstrates how to connect a low-code application to another Zoho service using microservices, form workflows, and custom Deluge scripting. By linking the form submission to the Zoho CRM connection, the Vehicle Service Request Form project establishes a working proof-of-concept in which submitted details are pushed automatically into Zoho CRM.
